

Lisna Thomas

Software QA Engineer · Test Automation · Web, iOS & Android Testing · AI Agents in Testing · Digital Health
lisnathomas99@gmail.com · 604-807-7228 · [LinkedIn](#) · [GitHub](#)

Professional Summary

Software QA engineer with 6+ years of experience in manual and automated testing across digital health, regulated gaming (web, iOS and Android) and client web applications. I verify features against design specs, Figma designs and acceptance criteria, manage the bug backlog in Jira and Azure DevOps, and maintain end-to-end test suites with Playwright, Selenium WebDriver and Appium in CI/CD pipelines, investigating failures and fixing flaky tests. At Altera Digital Health, I was one of the AI Champions who built an AI agent workflow that turns requirements into BDD tests, runs them with Playwright and commits the code. I read and write code in C#, Java, JavaScript and SQL.

Technical Skills

- **Test automation:** Playwright, Selenium WebDriver, Appium (desktop applications), Reqnroll (BDD/Gherkin, SpecFlow successor), Katalon Studio, NUnit, TestNG, JUnit, Page Object Model, end-to-end (E2E) testing
- **AI in testing:** AI agents, agentic test automation workflows, Claude, Claude API, AI-generated test cases, AI-driven requirement review, prompt engineering, validating AI output
- **Programming:** C#, .NET, Java, JavaScript, React Native, SQL
- **Bug tracking and specs:** Jira, Azure DevOps (Boards, Test Plans), Figma, design specs, acceptance criteria, bug backlog management, defect triage, clear bug reports with evidence
- **CI/CD and tools:** CI/CD pipelines, Git, GitHub, Docker, Visual Studio, Splunk
- **API and data:** REST and SOAP APIs, Postman, Swagger, SoapUI, SQL Server (SSMS), JSON
- **Testing types:** functional, regression, smoke, sanity, integration, end-to-end, exploratory, edge-case, cross-browser, iOS and Android mobile, desktop, API, database, UAT and release testing
- **Methodologies:** Agile/Scrum, Waterfall, SDLC, STLC
- **Digital health:** HL7, FHIR R4, EHR systems, healthcare interoperability, patient data privacy (PHI)

Professional Experience

QA Engineer · Altera Digital Health

Remote, Canada · March 2025 – October 2026

EHR and interoperability software for hospitals and health systems (formerly part of Allscripts).

- **AI agents:** As one of Altera's AI Champions, co-built an AI agent workflow (Claude) that reads requirements, generates Reqnroll feature files, runs the tests with Playwright, commits and pushes the test code, and produces a demo of the results
- Demoed the AI agent workflow to business analysts, helping bring AI into the team's QA process; the workflow cut test-case writing time by 70% per story and reduced manual testing to about 20% of its previous effort through automation
- Used Claude as an AI coding agent to generate test cases from user stories, write automation scripts and handle Git commits and pushes, integrated with Azure DevOps and Visual Studio
- Verified clinical features against requirements and acceptance criteria, catching gaps between what was specified and what was built before release
- QA for a 16-month feature integrating an external API for cross-network patient document search, with subscription create, cancel and notification workflows; owned test design, automation and end-to-end testing through release
- Maintained automated UI tests with Selenium WebDriver, C#/.NET and Reqnroll (BDD), and automated desktop application tests with Appium, investigating failures and fixing flaky tests
- Managed the bug backlog in Azure DevOps: reproduced, documented and tracked defects to resolution
- Tested REST APIs with Postman and Swagger, validated data with SQL in SSMS, and validated HL7 messages and FHIR resources while protecting patient health information (PHI)

Test Engineer · Gaming Laboratories International (GLI)

Burnaby, BC · October 2022 – March 2025

Independent testing and certification lab for casino, lottery, iGaming and sports betting products.

- Verified games in detail against approved rules, paytables, payouts and jurisdictional technical standards before certification
- Tested iGaming games on iOS and Android, covering edge cases in game play, payouts and bonus features
- Built end-to-end and cross-browser UI automation with Playwright and Selenium WebDriver in Java and C#
- Designed a Selenium WebDriver framework with TestNG and JUnit that cut manual testing effort by 50%
- Integrated automated tests into CI/CD pipelines, improving build and deployment efficiency by 40%
- Led adoption of API test automation with Postman, increasing test coverage by 25%
- Logged and tracked defects in JIRA and maintained a 98% on-time release rate across Agile and Waterfall projects

QA Analyst · Concentrix

Chilliwack, BC · August 2020 – October 2022

Global technology and customer experience services company; manual testing of client web applications.

- Reviewed requirements and user stories, and wrote detailed test scenarios and test cases
- Performed manual functional, smoke, sanity, regression, exploratory, cross-browser, UAT and release testing of client web applications, with a focus on edge cases
- Compared built screens against Figma designs to catch layout and design differences
- Tested REST and SOAP APIs with Postman and SoapUI, validated backend data with SQL in SSMS, and investigated application logs in Splunk
- Logged, tracked and retested defects in JIRA with clear steps to reproduce, screenshots and expected vs actual results; tracked team tasks in Trello
- Worked with developers, business analysts and client teams in Agile/Scrum

Projects

OpenMRS AI Test Automation · Personal project

[GitHub](#) · [Live test report](#)

End-to-end tests for OpenMRS, an open-source electronic medical record system used by clinics worldwide. Synthetic data only.

- Built Playwright (C#) UI tests for the clinician login flow and FHIR R4 API tests for patient search, data consistency and access control, in one Reqrroll (BDD) suite
- Designed the suite for fast failure diagnosis: every run saves captioned videos, Playwright traces for step-by-step replay, and every API request and response, so a failing test can be investigated instead of blindly re-run
- Used user-facing locators and automatic waiting to keep tests stable, and debugged real environment and build issues across Docker, framework updates and file locks
- Built an AI bot (Claude API) that turns user stories into BDD scenarios using only existing steps, and checks every step before tests run

Also: a Playwright login suite covering four user roles for a school management web app built by a developer collaborator.

Education

Bachelor of Computer Information Systems

University of the Fraser Valley, Abbotsford, BC · September 2018 – April 2020

Bachelor's degree in Computer Science

Mahatma Gandhi University, Kerala, India · 2015 – 2018
